

Bird Protection Nets

UV-stabilized HDPE Bird Protection Nets for orchards, greenhouses, ponds, and buildings—durable, lightweight, and safe for wildlife. Available from STIPL Agritech (GreenPro).

Lightweight & durable nets for crop, pond, and property protection

UV-stabilized HDPE bird nets designed to prevent crop damage, contamination, and bird entry—suitable for orchards, greenhouses, aquaculture, and buildings.

Bird Protection Nets from GreenPro provide a safe, eco-friendly solution to protect fruits, vegetables, fishponds, and infrastructure from bird damage. Manufactured from UV-stabilized HDPE monofilament yarns, these nets are lightweight, strong, and weather-resistant, ensuring long service life even under harsh outdoor conditions.

- **Material:** HDPE monofilament, UV-stabilized
- **Mesh sizes:** 15 mm to 50 mm (custom available)
- **Weight:** 15–60 gsm (depending on design)
- **Color options:** White, Black, Green, Transparent
- **UV Life:** Up to 5 years (700 Kly)

Applications

- Fruit orchards, vineyards, vegetable fields, and nurseries
- Fishponds, water bodies, and aquaculture enclosures
- Warehouses, airports, building façades, and industrial sheds

Advantages

- Prevents bird entry and crop contamination
- Protects fruits and seedlings without harming wildlife
- Lightweight, easy to install, and reusable
- Highly durable and resistant to tearing, rot, and UV degradation

Installation Tip: Stretch evenly and anchor firmly; for permanent setups, use wires and clamps at perimeter edges. Clean periodically to remove debris and ensure visibility for birds.

Bird Deterrence

Prevents crop loss with strong HDPE netting.

Aquaculture Safety

Protects fishponds from bird predation.

UV Resistance

Durable nets for up to 5 years of use.
